**Subject: IPU Group – Hydraulic Starting Systems for Industrial Engines**

**To Whom It May Concern,**

Warren CAT has enjoyed a solid working relationship with IPU's Starting Division both in product quality and customer service. What makes IPU's Starting Division so easy to work with is that they design and build the exact starting system we need rather than selling us an off-the-shelf unit. They design custom packages to fit the space constraints and specific starting requirements of the Caterpillar engines we supply to our oil and gas market customers.

We have benefitted from working closely with IPU's design team. They become a seamless extension of the value we offer to our customers. Their fast and professional service releases our designers to concentrate on our area of expertise: engine packages. We will continue to purchase from IPU as they have proven to be a top-tier OEM supplier for the support of our business.

Sincerely,  
**Chad J. Lambert**  
**Offshore Engineering Design Team Leader**  
**Warren Caterpillar Power Systems Division**

A handwritten signature in black ink that reads "Chad J. Lambert". The signature is written in a cursive style with a long horizontal flourish extending to the right.
