## OFFSHORE MAINTENANCE SERVICE

When Power is Critical

# Specialist installation, inspection and maintenance services for offshore platforms

## OFFSHORE MAINTENANCE

The IPU Service Division provides an officially-approved, manufacturer-backed installation, inspection and maintenance service. It covers three categories of IPU systems:

- Engine starting
- Fuel conditioning
- Oil conditioning

IPU equipment protects the operation of major installations and the safety of their staff. Our systems support Safety Critical Elements (SCEs) on ships and platforms in the world's wildest oceans.

But there are two factors that can affect the long-term reliability of the equipment we manufacture:

- **Was it properly installed?**
- **Is it properly maintained?**

That's where the IPU Service Division steps in.

### Specialists in our field ...

Our staff are specialists in the configuration, installation and maintenance of engine starting, oil conditioning and fuel polishing systems. Our experience with these systems goes back to the infancy of the industries themselves.

### ...and experienced in yours

We know our business but we understand yours too. IPU takes enormous pride in its history working with the oil and gas and shipping industries. We understand the safety, security and time constraints you work under. Our schedulers manage our activities so they complement your working day instead of disrupting it.

## OFFSHORE MAINTENANCE SERVICE

IPU's offshore maintenance service lightens the burden faced by today's platform operators. The ageing equipment on our platforms is becoming more maintenance-intensive as those platforms pass their expected lifespan.

### Why use IPU's Service Division for Installations?

### Why use IPU's Service Division for Inspections and Maintenance?

Lloyd's Register suggests that the maintenance costs will exceed build costs as platforms age. This places a heavy burden on operators to reduce costs. The IPU Service Division delivers economies of scale by driving engine starting, fuel polishing and oil conditioning systems through one supplier.

Reducing supplier numbers also helps reduce the 750,000 works orders Lloyd's Register suggests are required to maintain a platform during its working life. The IPU Service Division makes your life easier.
